**Subject:** Microsoft Settlement

Enough litigation already! Settle the Microsoft suit and let's get back to the business of innovation. This was never about the interests of the consumer but only about the pathetic attempt of competitors to do in the court room what they couldn't do in the market place. As I believe the secretary of the US Treasury said of the Enron collapse: That's the genius of the free market system; you have winners and losers. In this case, only sore losers who convinced enough people so that years later we're still suffering the effects of this ill timed and poorly managed suit. Witness the collapse of the high tech market. We, the consumers of high tech goods and services, are the losers.

Best wishes,
